

Multi blade fire dampers

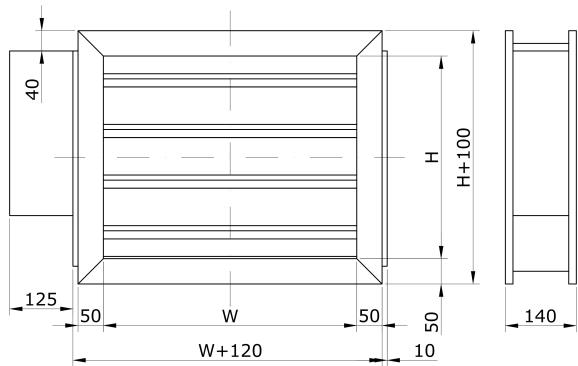

US(P)

Description

US(P) multi-blade fire dampers are designed for use in general ventilation installation, in points of penetration of these installations through building partitions. During fire, they allow to maintain fire resistance of the building partition through which ventilation and air conditioning ducts run. They also prevent propagation of fire, smoke and fire gases to the safe part of the building. The blade of the damper is made of filled heat-resistant material. Casing tightness class is C according to LST EN 1751. The dampers are tested and classified in accordance with standards LST EN 1366-2 and LST EN 13501-3 with allowable negative pressures up to 300 Pa. Dampers are CE marked using standard LST EN 15650. These types of dampers can be installed in solid walls of concrete or porous silicate blocks. The dampers US (P) have an electric actuator with a sensor that activates when the temperature rises to 72°C and closes with a closing spring. The damper have integrated end position contacts in the actuator. In the normal position, the blade of the damper is open when the damper is triggered in case of fire, the blade closes automatically. The fire resistance is EI60 (v_e i <-> o) S - WIP/S type. When fitted with original fire grilles, the fire resistance class is EI120 (v_e i <-> o) - WIP/T type. The dampers are made of galvanized sheet steel with a zinc content of 275 g/m² - corrosion class C2/C3 (L) according to LST EN ISO 12944 standard. Can also be manufactured from other materials, such as stainless steel sheet AISI 304 (1.4301) or, AISI 316L (1.4404) - corrosion class C5. The damper is sealed in the duct system by sealing with seals such as the standard ventilation duct system. The damper can be used at temperatures from -20 °C to + 50 °C. The maximum permissible absolute humidity inside and outside the air stream is 18 g/kg. The smoke damper must not be used in a system that carries solids.

Dimensions

	W[mm]	H[mm]
Minimum dimension	120	200
Maximum dimension	1000	1000
Standard step, mm		50
Longest side of smoke damper, mm		1000
Maximum cross section area of damper, m ²		1,0
Weight formula: $m[\text{kg}]=34*W[\text{m}]*H[\text{m}]+12*(W[\text{m}]+H[\text{m}])$	From 120 to 1000	From 200 to 1000

Ordering code

.....	US400200P230
Galvanized steel -	
AISI 304 – NP	
AISI 316L – 316NP	
Product	
Size	
Actuators 24V – P24, 230V - P230	

Sample: US400200P230 – made of galvanized steel, multi blade damper, dimensions WxH - 400x200 mm, with actuator 230V.

Technical data

Fire resistance classification according LST EN 13501-3

		EI 60 S 300 [Pa]	EI 120 S 300 [Pa]
Solid wall	EI 120 S – installation in solid masonry wall	Wet installation	120x200 - 1000x1000*
	Minimum thickness of the wall – 120 mm		
	Minimum density of the wall – 650 kg/m ³		
	Concrete or cement lime masonry mortar		
	ve i<-> o, distance between dampers 200 mm , to wall corner 75 mm		
Solid wall	EI 120 S – installation in solid brick wall	Wet installation	120x200 - 1000x1000*
	Minimum thickness of the wall – 120 mm		
	Minimum density of the wall – 550 kg/m ³		
	Concrete or cement lime masonry mortar		
	ve i<-> o, distance between dampers 200 mm , to wall corner 75 mm		
Solid wall Without duct	EI 120 S – installation in solid brick wall	Wet installation	120x200 - 1000x1000*
	Minimum thickness of the wall – 120 mm		
	Minimum density of the wall – 550 kg/m ³		
	Concrete or cement lime masonry mortar. If using wall grills, additional must be covered both wall sides with 12,5 mm gypsum boards.		
	ve i<-> o, atstumas tarp sklendžių 200 mm , iki sienos kampo 75 mm		

* Maximum allowable cross section area of fire damper - 1,0 m².
